Generator Tip of the Month

Problem: When trying to enter Activation code, screen says "Generator not activated". Screen is locked and will not clear.

Cause: Generator was started in Manual before activation; or someone hit the Esc key on the keypad (which tells the generator to go into manual mode). This locks out the keypad.

Solution: Make sure generator switch is set to off, pull 5A fuse on control panel, pull 15A fuse on T1 in Transfer Switch. Wait 15 - 20 seconds, replace fuses, generator should be back online.

\$50 / \$50 Referral Rebate – “Protect Your Neighbor” Program

Battery Maintenance Required

A “maintenance-free” battery could have a serious problem, even an explosion, when used with the older air-cooled generators. The older models – pre-Nexus, before June 2010 – use a battery trickle-charger that may dry out the battery. So make sure that the annual maintenance includes adding distilled water to the cells. Just snap off the caps – six small ones or one large one, depending on the brand. The current Nexus models are not supposed to overcharge, but check their batteries also.

Winter is almost here! Keep your customers’ Generators warm and happy with a Cold Weather Kit. Helps to bring the Generator up to operating temperature faster when it is COLD outside. **\$269.**
